

# Building like beavers

## Stigmergic robotics for landscape design

10<sup>th</sup> International Beaver Symposium  
Wednesday 17<sup>th</sup>, 2025

HARVARD  
UNIVERSITY

GRADUATE  
SCHOOL

OF  
DESIGN

Jordan Kennedy (Blackfeet Nation)

1. Post-doctoral Research Fellow – Harvard University Graduate School of Design, Landscape Architecture

1. Mechanical engineer
2. Beaver behavior
3. Multi-agent robotic systems
4. Landscape Design
5. Technologist

2. Tribal Partnerships Liaison and Beaver Behaviorist – Beaver Institute

1. Descendant of the Blackfeet Tribe
2. Kin-empathy frameworks (research and relationship building)
3. Beaver Futurism

3. Co-PI on NSF RCN:

1. Emily Fairfax, Jonah Piovia-Scott, Sandra Clinton
2. Integrating Traditional Ecological Knowledge from Tribal Narratives through cultural media and storytelling
3. The Great Plains

# BEAVER INSTITUTE

**Adam Burnett**

Executive Director  
Beaver Institute

**Mike Callahan**

Founder Board President  
Beaver Institute

**Loren Taylor**

Policy and Science Director  
Beaver Institute

**Aaron Hall**

BeaverCorps Program Director  
Beaver Institute

# BEAVER BOT TEAM

Karen Lee Bar-Sinai

Assistant Professor of Landscape Architecture  
Harvard University Graduate School of Design  
Landscape Robotics

Amir Degani

Faculty of Civil and Environmental Engineering  
Technion – Israel Institute of Technology  
Civil, Environmental, and Agricultural Robotics Lab

Federico Olivia

Postdoctoral Researcher  
Multi-agent robotic systems  
Technion – Israel Institute of Technology  
Civil, Environmental, and Agricultural Robotics  
Lab

William Boles

Theatre and Nature  
Master of Landscape Architecture at Harvard  
University Graduate School of Design

# BEAVER BOT TEAM

Justin Werfel

Senior Research Fellow  
Harvard University

Nathan Melenbrick

Fabrication Lab Supervisor/Lecturer  
Harvard University

Tolu Ademola

Mechanical Engineering Concentrator  
Excavation Robotics  
Harvard College

Ben Witzel

Computer Science Concentrator  
Convolution Neural Network – Training AI on  
Beaver habitat  
Harvard College

# BEAVER BOT (Not a single robot)

Reimagining landscapes through the engineering lens of beavers

---

# BEAVER BOT (Not a single robot)

Reimagining landscapes through the engineering lens of beavers

---

Chen et al, 2022

I love this →  
*BUT* not this kind of  
Beaver Bot we are  
talking about

# BEAVER BOT (Not a single robot)

Reimagining landscapes through the engineering lens of beavers

## SUITE OF ROBOTIC TOOLS

- 1) Habitat mapping (Digital twins)
- 2) Multi-agent simulation: Speaking/thinking like a beaver
- 3) Excavator robot (canals, ponds)
- 4) Harvester robot (vegetation clearing)
- 5) Deposition bot (build derms that are dam-like (BDAs))

Chen et al, 2022

**I love this →  
BUT not this kind of  
Beaver Bot we are  
talking about**

# HYPOTHESIS – TRAILS & CANALS ARE DECENTRALIZED COORDINATION MECHANISMS

3 months

Trails - move terrestrial resources

Canal initiation (beaver slide)  
2-5 years

Canal  
6 - 15 years

Large  
simple  
canal

~20 - ~50 years

~75+ years  
Connecting canals  
Complex system

Branching canals  
~50 + years

**Hypothesis**

~50 - ~75 years

Hypothesized evolution of trails to canals

IF a beaver trail system is productive (i.e., it connects to high quality vegetation or other aquatic resources), it slowly becomes reinforced into a canal over time.

# CONSTANT CONVERSATION: DIALOGUE BETWEEN BEAVERS AND LANDSCAPE

# CONSTANT CONVERSATION: DIALOGUE BETWEEN BEAVERS AND LANDSCAPE

**Beaver to beaver conversation across time:**

# CONSTANT CONVERSATION: DIALOGUE BETWEEN BEAVERS AND LANDSCAPE

**Beaver to beaver conversation across time:**  
Trails: Short-term conversation between colony members

# CONSTANT CONVERSATION: DIALOGUE BETWEEN BEAVERS AND LANDSCAPE

## **Beaver to beaver conversation across time:**

Trails: Short-term conversation between colony members

Canals: Long-term conversation across generations and colonies

# ARCHITECTURE AS LANGUAGE

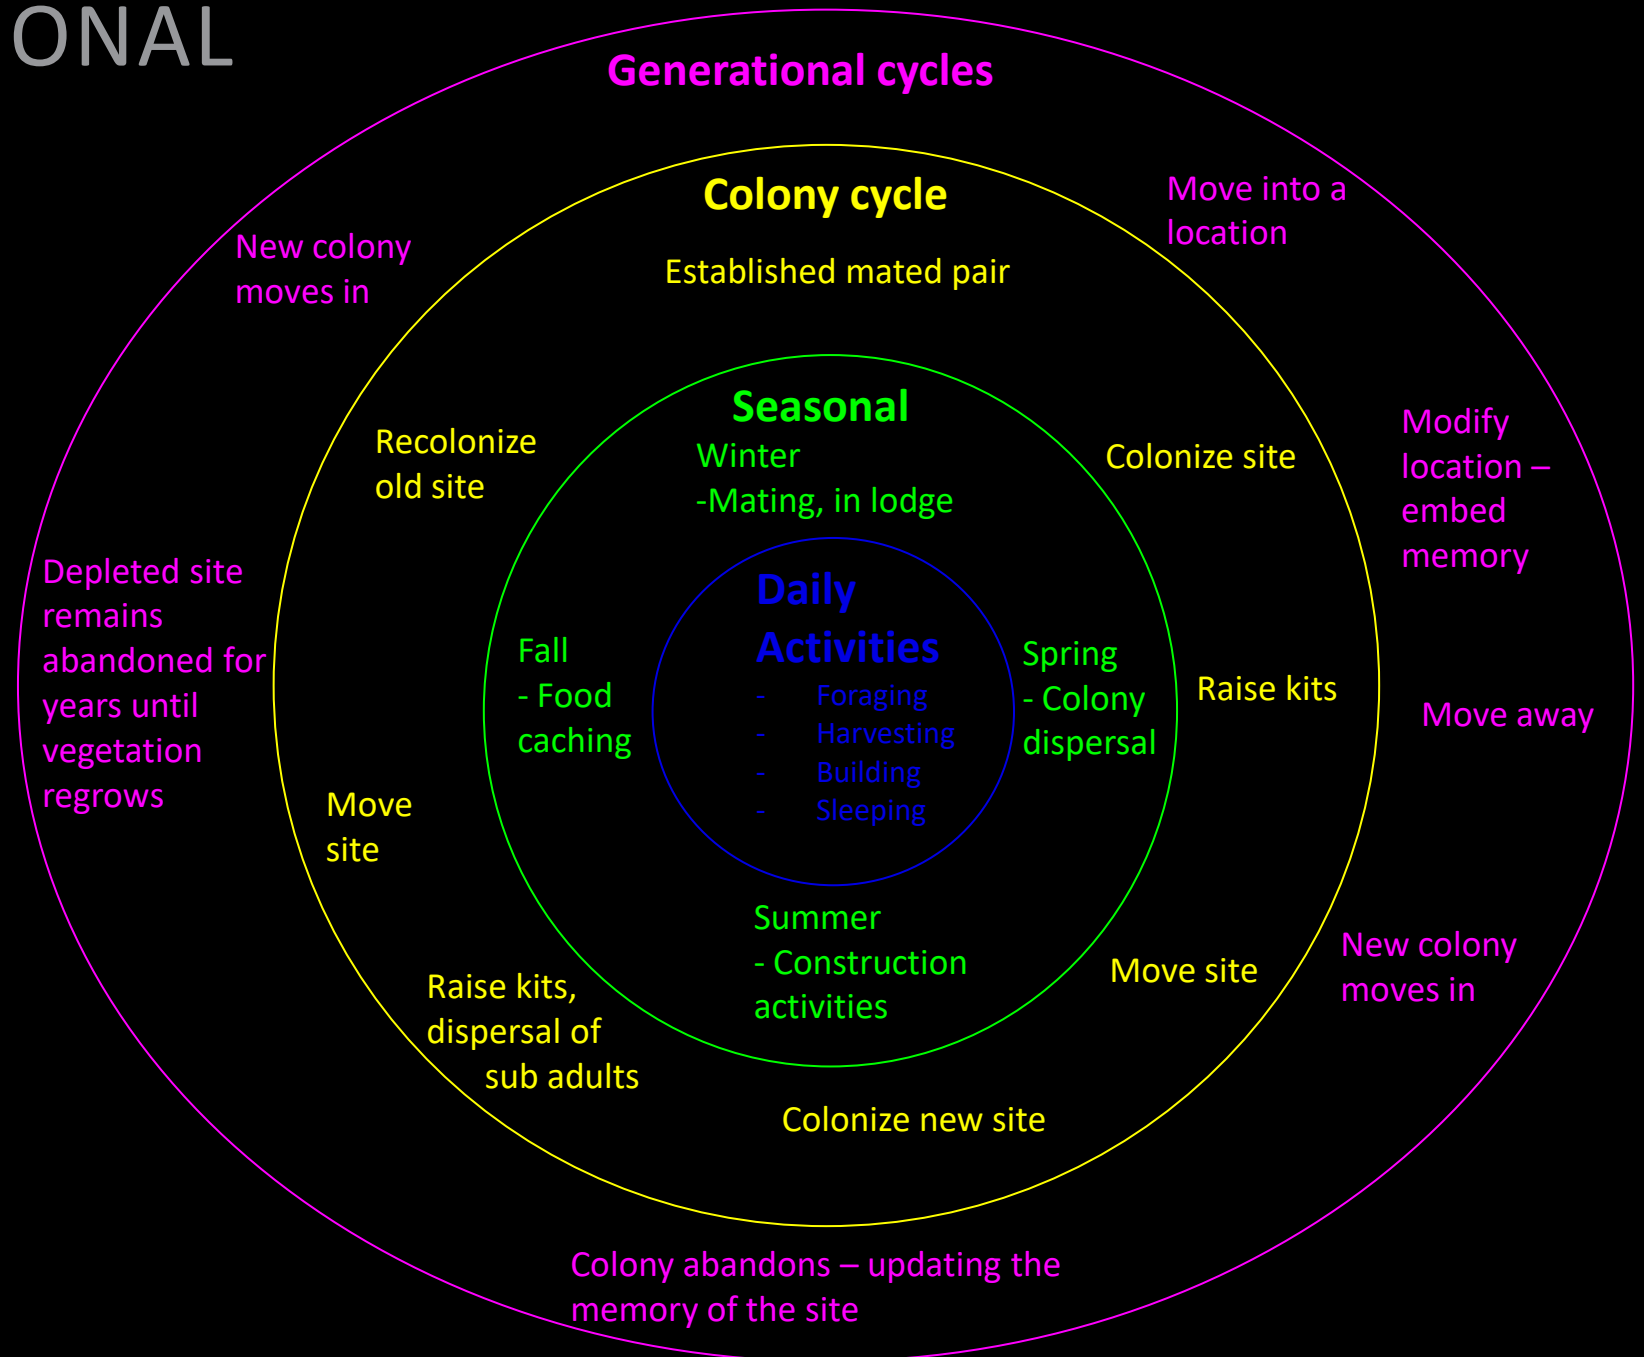

IF we can learn from beavers on how to speak with landscapes, perhaps we can, too.

Can we learn the language of architecture?

# MULTI-GENERATIONAL BUILDERS

INDIVIDUAL ACTIONS OF BEAVERS, OVER TIME, GIVE RISE TO SPATIAL AND TEMPORAL COMPLEXITY UPON THE LANDSCAPE

LANDSCAPE MODIFICATIONS INFORM FUTURE BEAVERS OF POTENTIAL HABITAT FITNESS OF A SITE

# MULTI-AGENT SIMULATION

## RULES OF BUILDING

- Vegetation gradients
- Flow conditions
- Follow trails, follow canals
- Physical limitations of real landscapes
  - Gravity, slope, obstacles

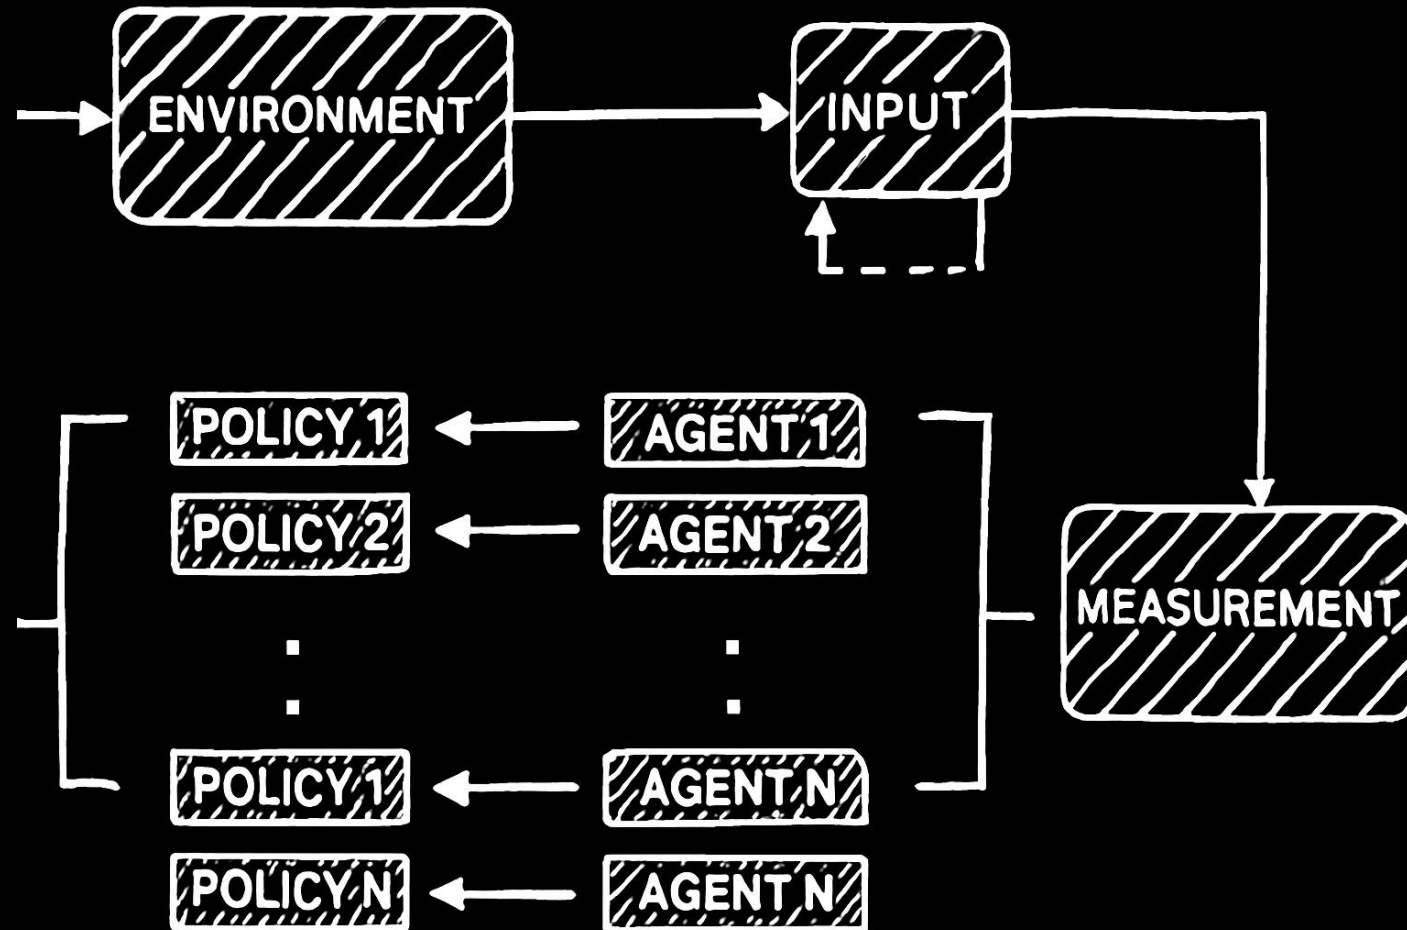

## DYNAMICS OF LANDSCAPES

- Low flow
- High flow
- Fire/Disaster
- Seasonality
- Variation in materials
- Variation in flow

Seasonality of landscapes

# SIMULATOR OVERVIEW – HYPOTHESIS TESTING

## BEAVERS – GOAL

### BEAVERS MIMICKING

- Realistic simulator
  - Branching
  - Harvesting
  - Storing
- Behavioral logic
  - Predators
  - Ponds/dams

### TODO

- Metrics
- Test scenarios
- Evaluate

### CONSTRUCTION GOAL

- Realistic simulator
  - Branching
  - Harvesting
  - Storing
  - Fluid Dynamics
- Behavioral logic
  - Ponds/dams

## BEAVERS - TRAIL BUILDING

### COMMENTS

- branching during exploration

## BEAVERS - GOAL

SPOILER

### COMMENTS

- trails reinforced when source found
- eating around the source

# BEAVERS - SCENARIO B.1

## COMMENTS

- eating around the source is good (too much?)
- exploring
- trail reinforcement consequence of exploration
- exploiting the river
- less carried by the river
  - cluttered (local info)

Trail and Canal Heatmap

# HYPOTHESIS TESTING IN REALITY

SANDBOX LANDSCAPES → DIGITAL REPRESENTATIONS OF REAL LANDSCAPES

# DIGITAL TWINS

Representing real landscapes virtually

## Data inputs

- Drone/UAV Imagery
- LIDAR IMAGERY
- Fabricated environments (Video games)
- Real environments digitally modified
- Satellite imagery \*

4 cm. vertical resolution

# CASE STUDY – RUMNEY MARSH

## DEGRADED INTERTIDAL ZONE

William Boles –  
Theatre and  
Landscapes

# CASE STUDY – RUMNEY MARSH

## DEGRADED INTERTIDAL ZONE

William Boles –  
Theatre and  
Landscapes

### Multi-bodied partnerships

1. Human Interventions
2. Landscape Robotics
  1. Beaver bot
3. Beavers

# HUMAN INTERVENTIONS

## HUMAN DESIGN TOOLS

---

- 1) Planting trees
- 2) Excavating canals – Tapping into the mechanism of communication  
beavers
- 3) Phytoremediation
- 4) BDAs (with filtration material built in)
- 5) Community engagement/ enabling community access

# BEAVER BOT: Process driven design

---

Reimagining landscapes through the engineering lens of beavers

## SUITE OF ROBOTIC TOOLS

- 1) Habitat mapping (Digital twins)
- 2) Multi-agent simulation: Speaking/thinking like a beaver
- 3) Excavator robot (canals, ponds)
- 4) Harvester robot (vegetation clearing)
- 5) Deposition bot (build berms that are dam-like (BDAs))

# BEAVERS

---

## LET BEAVERS BEAVER

If we can restore these landscapes, can we invite beavers back in and let them do what they do best?

+2.983e6 Elevation inside design square (with planted trees)

+2.983e6 Elevation inside design square (with planted trees)

- Tree design intervention
- ✕ Canal incisions

## DESIGN ACTIONS

1. Existing Site  
A degraded marsh located in Saugua, MA with urban edges.

2. Planting vegetation  
Willow's and Cottonwoods are planted to provide future food and material for beavers.

3. Environmental Robotics Incisions  
-Particular areas along the edges and interior of the marsh are noted as beginning points.

4. Creation of trails  
-Environmental robotics go back and forth between points to create indentions into the marsh. This will be read as existing 'trails' by the beavers.

5. Incorporation of beavers  
-As beavers inhabit the land they will futher dig canals and create dams that will route water into new ways, changing the hydrology of the site, fostering more biodiversity.

## CONCEPT SEQUENCE

## HYDRO MODELS

Rumney Marsh  
Saugus, MA

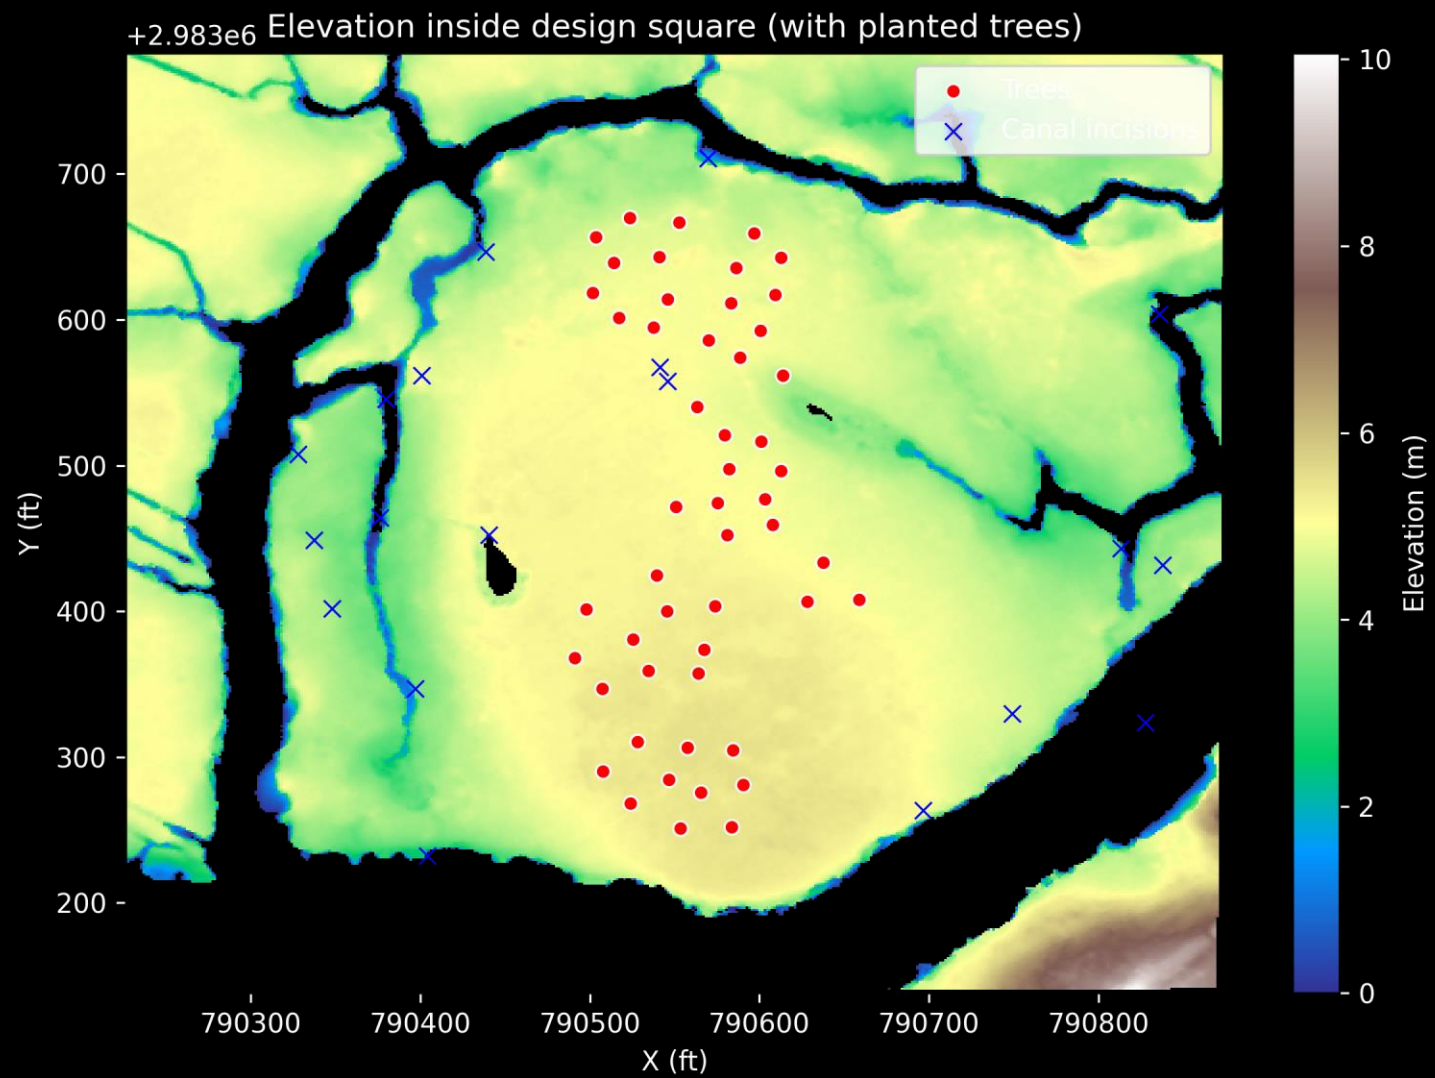

UNOCCUPIED BY BEAVER ACTIVITY  
42°26'02"N 71°00'03"W

OCCUPIED BY BEAVER ACTIVITY (SPECUALTION)  
42°26'02"N 71°00'03"W  
Water volume enhanced  
by 26,613 cubic feet,  
Approximately 199,094 gallons.

NEXT: Introduce  
digital beavers!!

# ONGOING WORK

## DEPLOY DIGITAL AGENTS IN 3D ENVIRONMENT

---

Currently, the multi-agent system works in 2D; we are building it for 3D landscapes.

Test on multiple landscape types and compare how Beaver Bot perform compared to real ecosystems.

## TEST INITIAL DESIGN CONDITIONS TO INFORM BEST LONG-TERM GOALS

---

Work with design interventions to reimagine landscapes across time to make better informed design decisions.

## MECHANICAL ROBOTS

---

Designing excavator mechanisms for a robotic tool
